ABSTRACT

This article analyzes the role of history as a science and academic discipline in modern society. Discussions will be held on the introduction of a multi-level system of training historians.

Keywords: multi-level structure of higher historical education, bachelor's, master's, competence, modules.

INTRODUCTION

The importance of the science of history is the formation of society's attitude to the past, which has always been an important condition of society's life. The roots and foundations of each new historical period have been preserved in the past, so society is forced to take this into account in solving many practical, socio-political and other tasks. The destruction of historical consciousness, its disintegration, means the creation of the basis of the mechanism of self-destruction of the people. The formation of historical consciousness is largely based on scientific knowledge, albeit incomplete, which shows the importance of historical education.

Undoubtedly, the experience of leading Western countries is of great importance in reforming modern education. Scientific educational institutions began to appear in Europe in the XII-XIII centuries. Over the centuries, the forms and quality of education have changed. Currently, the world's leading universities are located in Europe. Efforts have been made to include the higher education institutions of the country in the list of the best higher education institutions in the world, which is reflected in the concept of development of the higher education system of the Republic of Uzbekistan until 2030. The work on the concept will take our higher education to a new level. In this process, of course, there will be changes in the teaching of history. The quality of training historians will increase.

METODOLOGY

Today, the integration of education and science must answer the following questions:

How to transfer the innovations of modern historical science (pluralism of methodological approaches, expansion of research areas, from new sources, for example, “folk archives”, “oral history” materials) to the educational process?

How can students acquaint students and the wider audience with the modern achievements of history?

The modern methodological, informational, historical, analytical state of historiography should be consistent with the new practice of teaching history, to adopt other (in addition to traditional methods), other approaches to the analysis of factual materials and new research methods to select and critique sources includes.

The recommendations of the Council of Europe on the main tasks of the historical education content reflected in the curricula and textbooks seem very reasonable to us.

respect for historical truth; support for democratic change; protection of human rights, formation of tolerance and understanding; develop critical thinking and the ability to distinguish between deviations, misconceptions and stereotypes; promote relationships such as openness, diversity, empathy, and civic courage.

If these recommendations are followed, it will be possible to achieve the desired results. Here are some aspects of history education that should be reflected.

RESULTS

The 21st century is the age of technology. Information technology is entering all walks of life, including education. One of the most important prospects for history education in the future is online education. Online education has many advantages. One of the main advantages is that everyone can use it equally, the possibilities are not limited. It is possible to perform tasks on any computer and Internet connection. The learner can control the speed of learning. There is an opportunity to receive training from qualified specialists from different countries.

Online education provides an opportunity to communicate globally. In the online learning process, teachers are able to spend more time with their students than traditional lessons, which of course improves the quality of education. The introduction of online education in history education will lead to an increase in the quality of education, the quality and number of trained personnel. One of the factors envisaged in the Concept of Development of the Higher Education System of the Republic of Uzbekistan until 2030 is to increase the level of higher education coverage by 2030.

DISCUSSION

In higher education, history education is divided into bachelor's and master's degrees. The bachelor's degree is carried out in two forms: in the form of education in the process of training specialists and in the form of history education in the training of non-specialists. All aspects of history education are now well organized. The use of innovative technologies in the organization of education is one of the tools to bring higher history education to a new level. Until now, traditional education has taught students (or pupils) to acquire only ready-made knowledge. This method suppressed independent thinking, creative research and initiative in students (or pupils). Now it is time to organize the educational process on the basis of updated curriculum and modern lessons that meet the requirements of the standard. In other words, there is a need for teachers who are responsible for the organization of modern lessons instead of boring ones, who are professionally knowledgeable, have methodological skills, are responsible, have a perfect mastery of interactive pedagogical technology, and can organize education on the basis of innovations is growing.

CONCLUSION

In conclusion, the direction of change is the state policy aimed at financing education on the basis of advanced principles, a rational and well-thought-out system of reforming the education system using the best local and foreign experience, as well as, the actions taken by the subjects of education themselves - teachers, scholars, students - make it possible to take history education and education in general to a new level. Online education system, innovative technologies, newcomers to teaching History education has high prospects in the future. Sufficient foundations are being created in our country to achieve these prospects.
