ABSTRACT

In the article analyses creating a general cultural attitude towards the environment students as a factor in the development of healthy lifestyle. As we know, the development of independence and activity of thinking in preschoolers is facilitated by knowledge transmitted by adults based on the principle of accessibility. So, it is necessary that the knowledge included in the program becomes more complex with the growth of the cognitive and performing abilities of children.

Keywords: theories of preschool education, didactics, principle, conditions, mental education of a child.
