АННОТАЦИЯ

This article describes the physical and mechanical properties of rocks and their water content, methods of drilling explosive wells, types of explosives used, type of mortar used, method of blasting, total blasting time, weather conditions at the time of blasting. The calculation of the parameters of dust and gas pollution of the atmosphere during the visit has been considered.

Калит сўзлар: карьер, портлатиш ишлари, скважина, забойка, чанг ва газ ажралиб чиқиши, чангни бостириш, ялпи портлатиш, соапсток, экологик ҳолат.

REDUCE THE NEGATIVE EFFECTS ON THE ENVIRONMENT IN GENERAL EXPLOSIONS IN CAREERS

ABSTRACT

Calculation of parameters of dust and gas pollution in drilling and blasting operations in quarries taking into account the physico-mechanical properties of rocks and their water content, methods of drilling of explosive, the range of the used explosives, the type of materials used in the upper part of the well, methods of detonation, time of production of mass explosion, the weather conditions at the time of the massive explosion.

Keywords: quarry, blasting, borehole, kiln, dust and gas release, dust suppression, mass blasting, soapstock, environmental condition.
