ABSTRACT

This article discusses the state of the study of the expansion of the syntactic form of speech in traditional linguistics and its scientific significance. The expansion of the syntactic form of speech is undoubtedly directly related to how the language is used in practice. The practical application of language, in turn, is surrounded by external linguistic factors. In other words, at the same time, the human factor, its cognitive potential, is also important.

Keywords: transition, syntactic, sentence, grammar, linguistics, forms.
