Scientific supervisor, Lecturer at Samarkand State Institute of foreign languages

ABSTRACT

Learning foreign languages has become an influential part of our life, however, it is affected by many non-linguistic factors. As well as, language acquisition is a complicated process including several factors and that this process is incredibly influenced due to the flexibility of the brain. Moreover, the nature of memory systems involved in females and males also have a fundamental role that makes the genders different. Furthermore, age and gender are significant factors deeply influencing language acquisition process.

Keywords: Age, Gender, Acquisition, Affective, Second Language, Factors, Difference, Effect.
